

Head Displacement

When swapping heads around, it's important to note that the shape & dimensions of the combustion chamber isn't the same. The following info comes from Nick Jacob:

B201 48CC
B202 (1985 only) - 42CC
B202 46CC
B212/B234 (essentially the same head) - 48CC

With that information, you'll see that putting a B212 or B234 head on your B202 motor will drop the compression ratio, and putting a 1985 B202 head on any later car will substantially increase it.
